DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Platz on March 27, 2008.

The application has been amendment as follows:

Applicant cancelled claims 19 and 20.

In reference to independent claim 1, line 1, please add the phrase 'including a processor' after the word 'system'. This amendment is to clarify that the "system" refers to a hardware machine.

In reference to independent claim 7, line 3, please add the word 'with' after the phrase 'data type information associated',

In reference to independent claims 21, line 1, please delete the word 'readable' and add the word 'storage' in each of the independent claim.

In reference to independent claims 22, line 1, please delete the word 'readable' and add the word 'storage' in each of the independent claim.

REASONS FOR ALLOWANCE

1. Claims 1-3 and 5-22 are allowed.
2. The following is a statement of reason for the indication of allowable subject matter. The prior art, 'XSD: A Hierarchical Access Method for Indexing XML Schemata' to Kotsakis, teaches an improved method of maintaining XML document collections and searching XML collections by administering efficiently XML schemata. Kotsakis discloses a DCS (document compound structure) utilized to constrain the usability of XML markups. An XML schema may be seen as a DCS that has been enriched with type constraints. In general, A DCS may be viewed as the common ground between DTDs, XML schemata, and DataGuides. An XML document is said to be an instance of a DCS if its structure is embedded in the DCS root-directed graph. The XML query language and path expressions utilize a DCS to provide specific XML documents to a user searching the collection. The DCS generation method as disclosed by Kotsakis fails to describe a means of modifying schema definitions through the use of path expressions and cannot be utilized to teach the comparison made within the independent claims to compare a second XML document to a inferred first document in order for the schema to be modified. The inferring method claimed within the independent claims and more importantly, the modifying of XML schema definitions could not be found within the reference to Kotsakis. Merging similar DCSs offers an advantage since the resulting mergers act as metaclasses that organize the underlying XML documents in separate categories, which may be used to efficiently evaluate XML queries. However, the reference falls short to explicitly state a method of modifying schema definitions by inferring a new data type that is consistent with the inferred first and

second attributes. The reference to Fallside fails to cure the Kotsakis deficiencies. Fallside provides a validation technique using multiple purchase orders and updating elements based on second international purchase order and redefining elements within a schema. Fallside teaches the generation of schema definitions but fails to explicitly teach a means of determining if a second XML document includes a second attribute associated with the first element and second data type associated with the second attribute that is inconsistent with the first data type associated with the first attribute. The limitations found within the independent claim are not taught or suggested in the prior art of record when read as a whole.

The newly cited Non Patent Literature to Garofalakis titled 'XTRACT' provides a method for inferring DTD from XML documents. The reference generates a DTD and utilizes algorithms to deduce candidate DTDs. The reference states that several document content descriptors and XML schemas, are being evolved by the Web community. These extensions aim to add typing information, since DTDs treat all data as strings. The reference fails to explicitly describe a means of modifying schema definitions through the use of first and second input XML documents and cannot be utilized to compare a second XML document to an inferred first document in order for the data types within the XML schema definitions to be modified. The inferring method claimed within the independent claims and more importantly, the modifying of XML schema definitions could not be found within the reference to Garofalakis.

In reference to independent claims 1, 7, and 21, the claimed features listed below are restated to highlight the novel subject matter which when read as a whole, is not taught or suggested in the prior art of record. The independent claim recite a method of receiving a first XML document with attributes and data type information associated with the attributes as input,

inferring the first attributes and first data type information present in the XML document, and generating a schema definition defining elements that appear in the XML document along with inferred first attributes and first data type information. The schema definition is added to a collection and a second document is received as input and a determination is made as to whether a second set of attributes and data type information is inconsistent with the inference made with respect to the first data type information. If the determination is said to be inconsistent, the schema is modified by inferring new data type information consistent with the first and second attributes. It is the combination of these limitations found within each of the independent claims which is not taught or suggested in the prior art of record. Finally, it would not have been obvious to one of ordinary skill in the art to have combined the prior art of record to come up with applicant's claimed invention.
